TECHNICAL DETAILS

Professional foam generators made from stainless steel to avoid problems deriving from the normal corrosion of iron tanks or to resist particularly aggressive chemical products

Series 304 stainless steel is not however resistant to substances containing chlorine and liquids containing chlorine should not, therefore, be placed in the tank

The tanks undergo a pickling and electrochemical polishing process to improve resistance to corrosion .

These foam sprayers are very flexible to operate as they are equipped with a hose and lance with trigger gun; to operate, just fill the tank with the product to be sprayed and pressurise with the compressed air .

|-----------------------------|-------------------|
| ✓ Type of steel : | Aisi 304/316 |
| ✓ Tank capacity : | 24 Lt or 50 Lt |
| ✓ Maximum working pressure: | 8 Bar Max |
| ✓ Empty weight : | 16 Kg or 26 Kg |
| ✓ Chassis : | Stainless steel |
| ✓ Wheel: | Ø 125 mm or Ø 200 |
