

# **BENTONITE GRANULARE**

**Granulated Bentonite** 

#### CHARACTERISTICS

BENTONITE GRANULARE is a special granulated bentonite which is characterized by:

- > Avoiding dust production during its use
- $\succ$ High dispersability, which accentuates the colloidal characteristics of the montmorillonite, therefore improving the absorption capacity, the clarification effect and reducing the rehydration time with respect to traditional bentonites.
- Low dosage, due to its high deproteinization capacity  $\triangleright$
- > Fast and compact sedimentation
- > High purity, which avoids problems of transferring undesirable compounds and odors to the must/wine.

### **APPLICATIONS**

The characteristics of BENT. GRAN. make it an ideal bentonite for the protein stability of musts, juices, wines and vinegars, in which it can be used:

- To block the natural and exogenous enzyme activities (oxidase, pectinase,  $\triangleright$  $\beta$ -glycosidase,  $\beta$ -glucanase)
- For applications where the available rehydration time is short and when the use of  $\geq$ bentonite with a high dispersability and high deproteinization capacity is required
- For its preventative actions against "lightstruck"
- For its minimal adsorption of color and aromas.  $\triangleright$

## DOSAGE AND INSTRUCTIONS FOR USE

Dosage: 20-80 g/hL

BENTONITE GRANULARE swells quickly in water already in a ratio of 1:10; however its performance improves with 1:20 dilution. In order to accelerate and optimize its rehydration, it is advisable to wait for 30 minutes before use of mechanical stirrer.

### PACKING

25 kg Bags

This product is not considered dangerous therefore a material safety data sheet is not necessary.

**CHEMICAL ANALYSIS (%) COMPOSITION E 558** SiO<sub>2</sub>: 56-57 Al<sub>2</sub>O<sub>3</sub>: 19-19,5 TiO<sub>2</sub>: 0,77-0,80 Fe<sub>2</sub>O<sub>3</sub>: 4,7-4,8 P<sub>2</sub>O<sub>5</sub>: 0,24-0,26 MnO: 0,04-0,05 MgO: 4,20-4,25 CaO: 2,82-2,84 K<sub>2</sub>O: 0,70-0,72 Na<sub>2</sub>O: 3,33-3,35
